

## Hamilton North School

### ThresholdDrain with Perforated Grate

**In 2014 Hamilton North School embarked upon construction of a new purpose built administration block and multi-purpose building.**

The specification of the new building was that it would be multi-purpose. Housing administration areas, office spaces and specialist storage spaces, designers wanted the building to be flexible as to what could be done. Part of this included a large number of level threshold entries.

With the E2 building code at the forefront of the school and architect's minds, ACO's ThresholdDrain was specified as the best solution: completely conforming to the E2 building code.

ACO were able to work to the tight budget and time-frame to provide an excellent level threshold solution.

#### At a glance

##### Project

Hamilton North School Admin Block

##### Client:

Ministry of Education

##### Brief:

To provide safe level threshold drainage

##### Solution:

ACO's galvanised ThresholdDrain with perforated grates were specified
